## nag\_det\_complex\_gen (f03bnc)

### 1 Purpose

nag\_det\_complex\_gen (f03bnc) computes the determinant of a complex  $n$  by  $n$  matrix  $A$ . nag\_zgetrf (f07arc) must be called first to supply the matrix  $A$  in factorized form.

### 2 Specification

```
#include <nag.h>
#include <nagf03.h>
void nag_det_complex_gen (Nag_OrderType order, Integer n, const Complex a[],
                           Integer pda, const Integer ipiv[], Complex *d, Integer id[],
                           NagError *fail)
```

### 3 Description

nag\_det\_complex\_gen (f03bnc) computes the determinant of a complex  $n$  by  $n$  matrix  $A$  that has been factorized by a call to nag\_zgetrf (f07arc). The determinant of  $A$  is the product of the diagonal elements of  $U$  with the correct sign determined by the row interchanges.

### 4 References

Wilkinson J H and Reinsch C (1971) *Handbook for Automatic Computation II, Linear Algebra* Springer–Verlag

### 5 Arguments

1: **order** – Nag\_OrderType *Input*

*On entry:* the **order** argument specifies the two-dimensional storage scheme being used, i.e., row-major ordering or column-major ordering. C language defined storage is specified by **order** = Nag\_RowMajor. See Section 2.3.1.3 in How to Use the NAG Library and its Documentation for a more detailed explanation of the use of this argument.

*Constraint:* **order** = Nag\_RowMajor or Nag\_ColMajor.

2: **n** – Integer *Input*

*On entry:*  $n$ , the order of the matrix  $A$ .

*Constraint:* **n** > 0.

3: **a**[*dim*] – const Complex *Input*

**Note:** the dimension, *dim*, of the array **a** must be at least **pda** × **n**.

The  $(i,j)$ th element of the factorized form of the matrix  $A$  is stored in

**a**[( $j - 1$ ) × **pda** +  $i - 1$ ] when **order** = Nag\_ColMajor;  
**a**[( $i - 1$ ) × **pda** +  $j - 1$ ] when **order** = Nag\_RowMajor.

*On entry:* the  $n$  by  $n$  matrix  $A$  in factorized form as returned by nag\_zgetrf (f07arc).

4:	<b>pda</b> – Integer	<i>Input</i>
<i>On entry:</i> the stride separating row or column elements (depending on the value of <b>order</b> ) in the array <b>a</b> .		
<i>Constraint:</i> <b>pda</b> $\geq \mathbf{n}$ .		
5:	<b>ipiv[n]</b> – const Integer	<i>Input</i>
<i>On entry:</i> the row interchanges used to factorize matrix $A$ as returned by nag_zgetrf (f07arc).		
6:	<b>d</b> – Complex *	<i>Output</i>
<i>On exit:</i> the mantissa of the real and imaginary parts of the determinant.		
7:	<b>id[2]</b> – Integer	<i>Output</i>
<i>On exit:</i> the exponents for the real and imaginary parts of the determinant. The determinant, $d = (d_r, d_i)$ , is returned as $d_r = D_r \times 2^j$ and $d_i = D_i \times 2^k$ , where <b>d</b> = ( $D_r, D_i$ ) and $j$ and $k$ are stored in the first and second elements respectively of the array <b>id</b> on successful exit.		
8:	<b>fail</b> – NagError *	<i>Input/Output</i>
The NAG error argument (see Section 2.7 in How to Use the NAG Library and its Documentation).		

## 6 Error Indicators and Warnings

### NE\_ALLOC\_FAIL

Dynamic memory allocation failed.

See Section 2.3.1.2 in How to Use the NAG Library and its Documentation for further information.

### NE\_BAD\_PARAM

On entry, argument  $\langle value \rangle$  had an illegal value.

### NE\_INT

On entry, **n** =  $\langle value \rangle$ .

Constraint: **n**  $\geq 1$ .

### NE\_INT\_2

On entry, **pda** =  $\langle value \rangle$  and **n** =  $\langle value \rangle$ .

Constraint: **pda**  $\geq \mathbf{n}$ .

### NE\_INTERNAL\_ERROR

An internal error has occurred in this function. Check the function call and any array sizes. If the call is correct then please contact NAG for assistance.

An unexpected error has been triggered by this function. Please contact NAG.

See Section 2.7.6 in How to Use the NAG Library and its Documentation for further information.

### NE\_NO\_LICENCE

Your licence key may have expired or may not have been installed correctly.

See Section 2.7.5 in How to Use the NAG Library and its Documentation for further information.

### NE\_SINGULAR

The matrix  $A$  is approximately singular.

## 7 Accuracy

The accuracy of the determinant depends on the conditioning of the original matrix. For a detailed error analysis, see page 107 of Wilkinson and Reinsch (1971).

## 8 Parallelism and Performance

`nag_det_complex_gen` (f03bnc) is not threaded in any implementation.

## 9 Further Comments

The time taken by `nag_det_complex_gen` (f03bnc) is approximately proportional to  $n$ .

## 10 Example

This example calculates the determinant of the complex matrix

$$\begin{pmatrix} 1 & 1+2i & 2+10i \\ 1+i & 3i & -5+14i \\ 1+i & 5i & -8+20i \end{pmatrix}.$$
