

# NAG Library Function Document

## nag\_dormhr (f08ngc)

### 1 Purpose

nag\_dormhr (f08ngc) multiplies an arbitrary real matrix  $C$  by the real orthogonal matrix  $Q$  which was determined by nag\_dgehrd (f08nec) when reducing a real general matrix to Hessenberg form.

### 2 Specification

```
#include <nag.h>
#include <nagf08.h>

void nag_dormhr (Nag_OrderType order, Nag_SideType side,
                 Nag_TransType trans, Integer m, Integer n, Integer ilo, Integer ihi,
                 const double a[], Integer pda, const double tau[], double c[],
                 Integer pdc, NagError *fail)
```

### 3 Description

nag\_dormhr (f08ngc) is intended to be used following a call to nag\_dgehrd (f08nec), which reduces a real general matrix  $A$  to upper Hessenberg form  $H$  by an orthogonal similarity transformation:  $A = QHQ^T$ . nag\_dgehrd (f08nec) represents the matrix  $Q$  as a product of  $i_{\text{hi}} - i_{\text{lo}}$  elementary reflectors. Here  $i_{\text{lo}}$  and  $i_{\text{hi}}$  are values determined by nag\_dgebal (f08nhc) when balancing the matrix; if the matrix has not been balanced,  $i_{\text{lo}} = 1$  and  $i_{\text{hi}} = n$ .

This function may be used to form one of the matrix products

$$QC, Q^TC, CQ \text{ or } CQ^T,$$

overwriting the result on  $C$  (which may be any real rectangular matrix).

A common application of this function is to transform a matrix  $V$  of eigenvectors of  $H$  to the matrix  $QV$  of eigenvectors of  $A$ .

### 4 References

Golub G H and Van Loan C F (1996) *Matrix Computations* (3rd Edition) Johns Hopkins University Press, Baltimore

### 5 Arguments

1: **order** – Nag\_OrderType Input

*On entry:* the **order** argument specifies the two-dimensional storage scheme being used, i.e., row-major ordering or column-major ordering. C language defined storage is specified by **order** = Nag\_RowMajor. See Section 2.3.1.3 in How to Use the NAG Library and its Documentation for a more detailed explanation of the use of this argument.

*Constraint:* **order** = Nag\_RowMajor or Nag\_ColMajor.

2: **side** – Nag\_SideType Input

*On entry:* indicates how  $Q$  or  $Q^T$  is to be applied to  $C$ .

**side** = Nag\_LeftSide

$Q$  or  $Q^T$  is applied to  $C$  from the left.

**side** = Nag\_RightSide

$Q$  or  $Q^T$  is applied to  $C$  from the right.

*Constraint:* **side** = Nag\_LeftSide or Nag\_RightSide.

3: **trans** – Nag\_TransType

*Input*

*On entry:* indicates whether  $Q$  or  $Q^T$  is to be applied to  $C$ .

**trans** = Nag\_NoTrans

$Q$  is applied to  $C$ .

**trans** = Nag\_Trans

$Q^T$  is applied to  $C$ .

*Constraint:* **trans** = Nag\_NoTrans or Nag\_Trans.

4: **m** – Integer

*Input*

*On entry:*  $m$ , the number of rows of the matrix  $C$ ;  $m$  is also the order of  $Q$  if **side** = Nag\_LeftSide.

*Constraint:* **m**  $\geq 0$ .

5: **n** – Integer

*Input*

*On entry:*  $n$ , the number of columns of the matrix  $C$ ;  $n$  is also the order of  $Q$  if **side** = Nag\_RightSide.

*Constraint:* **n**  $\geq 0$ .

6: **ilo** – Integer

*Input*

7: **ihii** – Integer

*Input*

*On entry:* these **must** be the same arguments **ilo** and **ihii**, respectively, as supplied to nag\_dgehrd (f08nec).

*Constraints:*

if **side** = Nag\_LeftSide and **m**  $> 0$ ,  $1 \leq \text{ilo} \leq \text{ihii} \leq \text{m}$ ;

if **side** = Nag\_LeftSide and **m** = 0, **ilo** = 1 and **ihii** = 0;

if **side** = Nag\_RightSide and **n**  $> 0$ ,  $1 \leq \text{ilo} \leq \text{ihii} \leq \text{n}$ ;

if **side** = Nag\_RightSide and **n** = 0, **ilo** = 1 and **ihii** = 0.

8: **a[dim]** – const double

*Input*

**Note:** the dimension, **dim**, of the array **a** must be at least

$\max(1, \text{pda} \times \text{m})$  when **side** = Nag\_LeftSide;

$\max(1, \text{pda} \times \text{n})$  when **side** = Nag\_RightSide.

*On entry:* details of the vectors which define the elementary reflectors, as returned by nag\_dgehrd (f08nec).

9: **pda** – Integer

*Input*

*On entry:* the stride separating row or column elements (depending on the value of **order**) in the array **a**.

*Constraints:*

if **side** = Nag\_LeftSide, **pda**  $\geq \max(1, \text{m})$ ;

if **side** = Nag\_RightSide, **pda**  $\geq \max(1, \text{n})$ .

10: **tau**[*dim*] – const double*Input***Note:** the dimension, *dim*, of the array **tau** must be at least

$\max(1, \mathbf{m} - 1)$  when **side** = Nag\_LeftSide;  
 $\max(1, \mathbf{n} - 1)$  when **side** = Nag\_RightSide.

*On entry:* further details of the elementary reflectors, as returned by nag\_dgehrd (f08nec).11: **c**[*dim*] – double*Input/Output***Note:** the dimension, *dim*, of the array **c** must be at least

$\max(1, \mathbf{pdc} \times \mathbf{n})$  when **order** = Nag\_ColMajor;  
 $\max(1, \mathbf{m} \times \mathbf{pdc})$  when **order** = Nag\_RowMajor.

The (*i, j*)th element of the matrix *C* is stored in

**c**[ $((j - 1) \times \mathbf{pdc} + i - 1)$ ] when **order** = Nag\_ColMajor;  
**c**[ $((i - 1) \times \mathbf{pdc} + j - 1)$ ] when **order** = Nag\_RowMajor.

*On entry:* the *m* by *n* matrix *C*.*On exit:* **c** is overwritten by *QC* or *Q<sup>T</sup>C* or *CQ* or *CQ<sup>T</sup>* as specified by **side** and **trans**.12: **pdc** – Integer*Input**On entry:* the stride separating row or column elements (depending on the value of **order**) in the array **c**.*Constraints:*

if **order** = Nag\_ColMajor, **pdc**  $\geq \max(1, \mathbf{m})$ ;  
if **order** = Nag\_RowMajor, **pdc**  $\geq \max(1, \mathbf{n})$ .

13: **fail** – NagError \**Input/Output*

The NAG error argument (see Section 2.7 in How to Use the NAG Library and its Documentation).

## 6 Error Indicators and Warnings

### NE\_ALLOC\_FAIL

Dynamic memory allocation failed.

See Section 2.3.1.2 in How to Use the NAG Library and its Documentation for further information.

### NE\_BAD\_PARAM

On entry, argument  $\langle\text{value}\rangle$  had an illegal value.

### NE\_ENUM\_INT\_3

On entry, **side** =  $\langle\text{value}\rangle$ , **m** =  $\langle\text{value}\rangle$ , **n** =  $\langle\text{value}\rangle$  and **pda** =  $\langle\text{value}\rangle$ .  
Constraint: if **side** = Nag\_LeftSide, **pda**  $\geq \max(1, \mathbf{m})$ ;  
if **side** = Nag\_RightSide, **pda**  $\geq \max(1, \mathbf{n})$ .

On entry, **side** =  $\langle\text{value}\rangle$ , **pda** =  $\langle\text{value}\rangle$ , **m** =  $\langle\text{value}\rangle$  and **n** =  $\langle\text{value}\rangle$ .  
Constraint: if **side** = Nag\_LeftSide, **pda**  $\geq \max(1, \mathbf{m})$ ;  
if **side** = Nag\_RightSide, **pda**  $\geq \max(1, \mathbf{n})$ .

### NE\_ENUM\_INT\_4

On entry, **side** =  $\langle\text{value}\rangle$ , **m** =  $\langle\text{value}\rangle$ , **n** =  $\langle\text{value}\rangle$ , **ilo** =  $\langle\text{value}\rangle$  and **ihii** =  $\langle\text{value}\rangle$ .  
Constraint: if **side** = Nag\_LeftSide and **m** > 0,  $1 \leq \mathbf{ilo} \leq \mathbf{ihii} \leq \mathbf{m}$ ;  
if **side** = Nag\_LeftSide and **m** = 0, **ilo** = 1 and **ihii** = 0;

if **side** = Nag\_RightSide and **n** > 0,  $1 \leq \mathbf{ilo} \leq \mathbf{ih} \leq \mathbf{n}$ ;  
 if **side** = Nag\_RightSide and **n** = 0, **ilo** = 1 and **ih** = 0.

#### NE\_INT

On entry, **m** =  $\langle value \rangle$ .  
 Constraint: **m**  $\geq 0$ .

On entry, **n** =  $\langle value \rangle$ .  
 Constraint: **n**  $\geq 0$ .

On entry, **pda** =  $\langle value \rangle$ .  
 Constraint: **pda** > 0.

On entry, **pdc** =  $\langle value \rangle$ .  
 Constraint: **pdc** > 0.

#### NE\_INT\_2

On entry, **pdc** =  $\langle value \rangle$  and **m** =  $\langle value \rangle$ .  
 Constraint: **pdc**  $\geq \max(1, \mathbf{m})$ .

On entry, **pdc** =  $\langle value \rangle$  and **n** =  $\langle value \rangle$ .  
 Constraint: **pdc**  $\geq \max(1, \mathbf{n})$ .

#### NE\_INTERNAL\_ERROR

An internal error has occurred in this function. Check the function call and any array sizes. If the call is correct then please contact NAG for assistance.

An unexpected error has been triggered by this function. Please contact NAG.

See Section 2.7.6 in How to Use the NAG Library and its Documentation for further information.

#### NE\_NO\_LICENCE

Your licence key may have expired or may not have been installed correctly.

See Section 2.7.5 in How to Use the NAG Library and its Documentation for further information.

## 7 Accuracy

The computed result differs from the exact result by a matrix  $E$  such that

$$\|E\|_2 = O(\epsilon)\|C\|_2,$$

where  $\epsilon$  is the *machine precision*.

## 8 Parallelism and Performance

`nag_dormhr` (f08ngc) is threaded by NAG for parallel execution in multithreaded implementations of the NAG Library.

`nag_dormhr` (f08ngc) makes calls to BLAS and/or LAPACK routines, which may be threaded within the vendor library used by this implementation. Consult the documentation for the vendor library for further information.

Please consult the x06 Chapter Introduction for information on how to control and interrogate the OpenMP environment used within this function. Please also consult the Users' Note for your implementation for any additional implementation-specific information.

## 9 Further Comments

The total number of floating-point operations is approximately  $2nq^2$  if **side** = Nag\_LeftSide and  $2mq^2$  if **side** = Nag\_RightSide, where  $q = i_{hi} - i_{lo}$ .

The complex analogue of this function is `nag_zunmhr` (f08nuc).

## 10 Example

This example computes all the eigenvalues of the matrix  $A$ , where

$$A = \begin{pmatrix} 0.35 & 0.45 & -0.14 & -0.17 \\ 0.09 & 0.07 & -0.54 & 0.35 \\ -0.44 & -0.33 & -0.03 & 0.17 \\ 0.25 & -0.32 & -0.13 & 0.11 \end{pmatrix},$$

and those eigenvectors which correspond to eigenvalues  $\lambda$  such that  $\text{Re}(\lambda) < 0$ . Here  $A$  is general and must first be reduced to upper Hessenberg form  $H$  by nag\_dgehrd (f08nec). The program then calls nag\_dhseqr (f08pec) to compute the eigenvalues, and nag\_dhsein (f08pkc) to compute the required eigenvectors of  $H$  by inverse iteration. Finally nag\_dormhr (f08ngc) is called to transform the eigenvectors of  $H$  back to eigenvectors of the original matrix  $A$ .
